

PUDI THRIVIKRAM

+91 93901 71829 | work.with.thrivikram@gmail.com | linkedin.com/in/thrivikram-pudi | github.com/SiddhuPudi

SUMMARY

Full stack developer with hands-on experience building end-to-end web applications using React, Node.js, MySQL. Strong problem-solver and system builder with experience designing interactive UIs, backend services, and REST APIs. Also built LLM-powered text processing pipelines and conducted structured NLP model evaluation, demonstrating the ability to design and experiment with modern AI-driven systems.

EDUCATION

Indian Institute of Information Technology Dharwad (IIIT Dharwad)

B.Tech in Computer Science and Engineering

2023 – 2027

TECHNICAL SKILLS

Programming Languages: C, C++, Java, JavaScript, Python (Basics)

Frameworks / Libraries: React, Node.js, Express.js

Databases: MySQL, PostgreSQL, MongoDB

Tools / Platforms: Git, GitHub, Docker, Vercel, Render, Canva

Concepts: REST APIs, Authentication (JWT), System Design Basics, NLP Fundamentals

PROJECTS

Talent Sync — Full Stack Job Platform

(Deployed)

React, Node.js, Express.js, PostgreSQL, Socket.IO, Docker

Developed a full-stack job platform with authentication, job posting, applications, and user connections.

Implemented real-time chat and notifications using Socket.IO with online/offline status and typing indicators.

Designed scalable backend architecture with REST APIs, JWT authentication, and persistent state management.

Integrated PostgreSQL with Prisma ORM and implemented rate limiting, caching (Redis), and event streaming (Kafka).

Shinsei Keikaku — Gamified Task Management App

Frontend Development

React, JavaScript, CSS

Built a gamified task management interface with quests, difficulty levels, EXP rewards, and user progression tracking.

Designed reusable components and managed UI state for dynamic updates and user interaction.

GitHub: github.com/SiddhuPudi/shinsei-keikaku

Document-Grounded Dietary QA System (TF-IDF)

NLP System Design

Node.js, TF-IDF, Natural.js

Built a document-grounded question answering system using TF-IDF retrieval over 45+ dietary PDF documents.

Designed a complete NLP pipeline including text extraction, preprocessing, chunking, indexing, and cosine similarity-based retrieval.

Implemented evaluation framework with test queries to measure accuracy and retrieval performance.

Ensured explainability and zero hallucination by restricting answers strictly to source documents.

GitHub: github.com/SiddhuPudi/Dietary-QA-System-using-TF-IDF

POS Tagging Evaluation System

NLP Model Evaluation

Python, NLTK, spaCy, Stanza

Developed an evaluation framework to compare rule-based, statistical, and neural POS tagging models on a common dataset.

Implemented metrics including Accuracy, Precision, Recall, F1-score, and confusion matrix for detailed analysis.

Ensured fair comparison through consistent token alignment across different tagging systems.

Analyzed model performance and identified strengths of neural models over traditional approaches.
